GLP1	CELT-112 (LUXendin645)	645/664	7.5	Selective <sup>9</sup>	Widefield/confocal/2- photon microscopy in live and fixed mammalian cells and tissue, as well as anaesthetized mice <sup>8</sup> TR-FRET <sup>9,10,11</sup>
GLP1	CELT-113 (LUXendin762)	762/784	7.0	Selective <sup>9</sup>	Widefield/confocal/2- photon microscopy in live and fixed mammalian cells and tissue, as well as anaesthetized mice. <sup>8</sup> Non-invasive fluorescence preclinical imaging

<sup>a</sup>Ki or % of displacement at 1 µM measured by radioligand binding assay. In the case of the C5a5 ligand corresponds to the EC<sub>50</sub>. In the case of GLP1R ligands corresponds to pIC50. In the case of OTR ligands, Ki was determined by competition experiments against [<sup>3</sup>H]AVP (labelled arginine vasopressin) for CELT-501 and Kd by TR-FRET saturation binding experiments for CELT-502.

In case you are interested by any of these ligands and they have not been validated yet for the kind of assay you want to test, please let us know: based on our experience we could advise you about which fluorophore works better for each assay, and eventually develop new versions -i.e. keeping the pharmacophore but changing the fluorophore- in a turnaround of 4-6 weeks.
